

### IN THE CLAIMS

1. (Currently Amended) A method for processing transactions, comprising:  
initiating a transaction to access an account;  
sending an authorization request to an authorization entity associated with the account;  
sending itemization detail data associated with the transaction to the authorization entity,  
the itemization detail data indicating particular items associated with the  
transaction; and  
routing at least the itemization detail data to an owner of the account.
2. (Original) The method of claim 1, further comprising:  
generating a transaction detail report including the itemization detail data and transaction  
summary data; and  
sending the transaction detail report to the owner of the account.
3. (Original) The method of claim 1, wherein sending the itemization detail data further  
comprises sending the itemization detail data via at least one of a facsimile connection, a modem  
connection, a network connection, an email, and an Internet connection.
4. (Original) The method of claim 1, further comprising generating the transaction  
itemization detail data.
5. (Original) The method of claim 4, wherein generating the transaction itemization  
detail further comprises generating an image of a receipt associated with the transaction.

6. (Original) The method of claim 4, wherein generating the transaction itemization detail further comprises generating a text file including data related to items purchased in the transaction.

7. (Original) The method of claim 4, wherein generating the transaction itemization detail further comprises generating an image of a signature of an account user initiating the transaction.

8. (Original) The method of claim 1, wherein a plurality of users are authorized to access the account, and the method further comprises:

generating identification data associated with a selected one of the users initiating the transaction; and

sending the identification data to the owner of the account.

9. (Original) The method of claim 1, wherein sending the itemization detail data further comprises sending the itemization detail data responsive to the authorization entity approving the authorization request.

10. (Original) The method of claim 1, wherein sending the itemization detail data further comprises sending the itemization detail data coincident with the authorization request.

11. (Currently Amended) A method, comprising:

processing a transaction for accessing an account at a first location;

generating transaction detail data associated with the transaction, the transaction detail data indicating particular items associated with the transaction; and

communicating the transaction detail data to an owner of the account remote from the first location.

12. (Original) The method of claim 12, wherein communicating the itemization detail data further comprises sending the itemization detail data via at least one of a facsimile connection, a modem connection, a network connection, an email, and an Internet connection.

13. (Original) The method of claim 12, wherein generating the transaction itemization detail, further comprises generating at least one of an image of a receipt associated with the transaction, a text file including data related to items purchased in the transaction, and an image of a signature of an account user initiating the transaction.

14. (Currently Amended) A system for processing transactions, comprising:

a vendor entity adapted to initiate a transaction to access an account, generate an authorization request, and generate itemization detail data associated with the transaction, the itemization detail data indicating particular items associated with the transaction; and

an authorization entity associated with the account and adapted to the receive authorization request, receive the itemization detail data from the vendor entity, and route at least the itemization detail data to an owner of the account.

15. (Original) The system of claim 15, wherein one of the vendor entity and the authorization entity is adapted to generate a transaction detail report including the itemization detail data and transaction summary data, and the authorization entity is adapted to sending the transaction detail report to the owner of the account.

16. (Original) The system of claim 15, wherein the authorization unit is adapted to send the itemization detail data to the owner via at least one of a facsimile connection, a modem connection, a network connection, an email, and an Internet connection.

17. (Original) The system of claim 15, wherein the vendor entity is further adapted to generate the transaction itemization detail data.

18. (Original) The system of claim 18, wherein the transaction itemization detail further comprises an image of a receipt associated with the transaction.

19. (Original) The system of claim 18, wherein the transaction itemization detail further comprises a text file including data related to items purchased in the transaction.

20. (Original) The system of claim 18, wherein the transaction itemization detail further comprises an image of a signature of an account user initiating the transaction.

21. (Original) The system of claim 15, wherein a plurality of users are authorized to access the account, and the transaction itemization detail comprises identification data associated with a selected one of the users initiating the transaction.

22. (Original) The system of claim 15, wherein the authorization entity is further adapted to approve the authorization request and the vendor entity is adapted to send the itemization detail data to the authorization entity responsive to the approval of the authorization request.

23. (Original) The system of claim 15, wherein the vendor entity is adapted to send the itemization detail data to the authorization entity coincident with the authorization request.

24. (Currently Amended) A system, comprising:

a communications network; and

a first entity configured to process a transaction for accessing an account at a first location, generate transaction detail data associated with the transaction, the transaction detail data indicating particular items associated with the transaction; and communicate the transaction detail data over the communications network to an owner of the account remote from the first location.

25. (Original) The system of claim 25, wherein the first entity is adapted to communicate the transaction detail data to the owner over at least one of a facsimile connection, a modem connection, a network connection, an email, and an Internet connection.

26. (Original) The system of claim 25, wherein the transaction itemization detail includes at least one of an image of a receipt associated with the transaction, a text file including data related to items purchased in the transaction, and an image of a signature of an account user initiating the transaction.

27. (Currently Amended) A system, for processing transactions, comprising:  
means for initiating a transaction to access an account;  
means for sending an authorization request to an authorization entity associated with the account;  
means for sending itemization detail data associated with the transaction to the authorization entity, the itemization detail data indicating particular items associated with the transaction; and  
means for routing at least the itemization detail data to an owner of the account.

28. (Currently Amended) A system, comprising:

means for processing a transaction for accessing an account at a first location;

means for generating transaction detail data associated with the transaction, the transaction detail data indicating particular items associated with the transaction;

and

means for communicating the transaction detail data to an owner of the account remote from the first location.
